Case Study -Insurance Policy Administration

Sl.No	Methods / Functionalities	Reviews
1	Table Creation	Ensure your script is free from errors when commit
2	Project Structure	com.management package was not created, under the same, management classes has to be created and implemented, change the project structure accordingly
3	1st Module	Implementations were done, but couldn't able to execute as it contains many errors, kindly rectify
4	Others	Before Commit, ensure your code and db script is free from errors
5	Sample Input data	Provide some data's to execute and verify the output

Note: Things to be done before1st review

1	Working Model Showcase:	Ensure the team is ready to present a working model of the first module.
		The demonstration should showcase the functionality of the any one module.
2	Coverage of Student Module Functionalities:	Verify that the implemented module covers all the required functionalities outlined for that module.
3	Live Demonstration by Respective Person:	Assign the responsible person for the student module to run the application during the showcase.
		They should demonstrate the various functionalities and produce the expected outputs.
4	Team Awareness:	Ensure all team members are familiar with the implementation details and functionalities of the module.
		Conduct knowledge sharing sessions or provide documentation to disseminate information among team members.
